

## How to create bootable media with Hirenboot ISO file

**Tool to make pen drive bootable download from below link**

<https://www.hirensbootcd.org/usb-booting/>

### **Choose Device and ISO**

Only USB flash drives will be listed in the **USB Device** list. If you can't see your USB flash drive in the list, firstly try formatting your USB flash drive with Windows Format tool (Goto My Computer -> Right Click USB Drive -> Click 'Format'... -> Click 'Restore device defaults' -> Keep 'Quick Format' Checked -> Click 'Start') and then click the refresh button on the right side of USB Device list.

If the ISO file is located in same folder with the exe, then it will be automatically selected. Otherwise you can drag and drop the ISO file over the application window or you can select the ISO file manually.

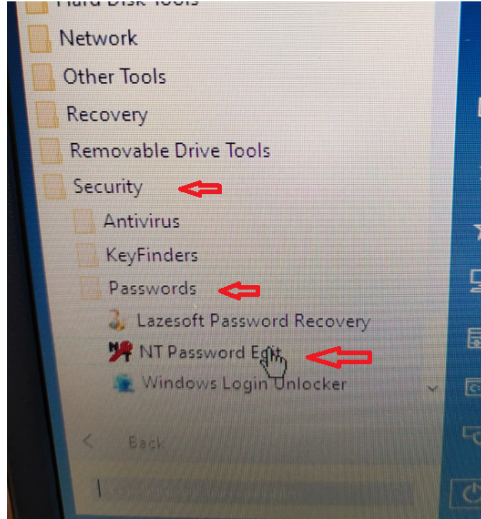

### **Download the ISO file from below link**

<https://www.hirensbootcd.org/download/>

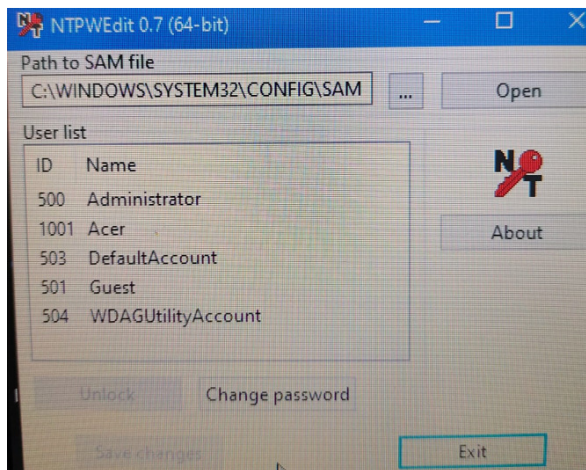

Filename	HBCD_PE_x64.iso (Thanks to all our Supporters for providing fast and reliable mirror servers)
Filesize	2.88 GB (3099203584 bytes)
ISO MD5	BEC7304FE2EB11DE495B9EA7B73C38AA
ISO SHA1	EC7D4EC02A8772A4ECAEE59A9095D65B043AA77D
ISO SHA-256	8281107683E81BE362AFD213026D05B2219BC6A7CA9AF4D2856663F3FFC17BFD

## How to remove Windows password

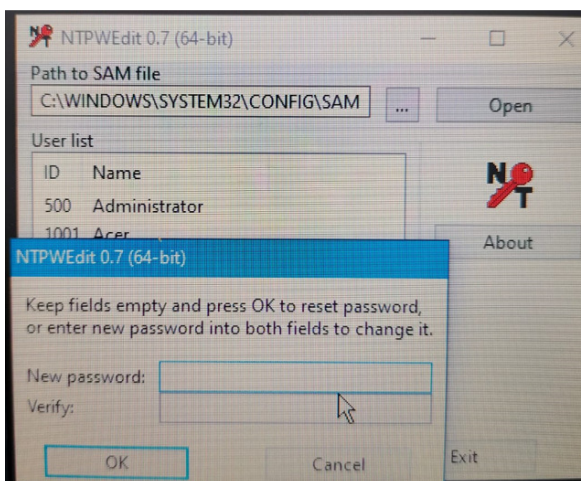

1. One boot through Hiren bootable media , go to Security → Passwords → NT Password Edit as per below snap.

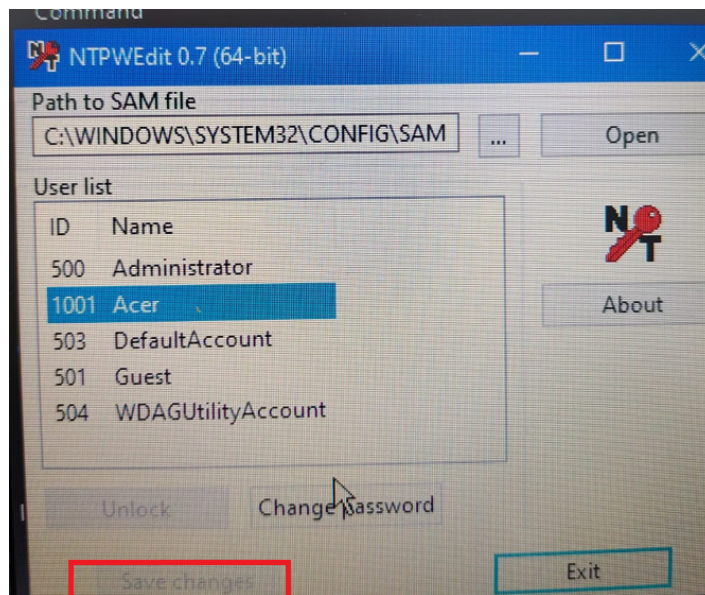

2. Open the SAM file located in C:\Windows\System32\config\SAM as per below snap.

3. Select the user and click on change password. If you do not want password just keep it blank and click on “OK”.

4. Once password is changed click on “Save Changes” as per below snap.

5. Restart the machine and remove the pen drive and boot through local drive.
